

AMENDMENTS TO THE SPECIFICATION

Paragraph beginning at page 14, line 11:

Thus, when image data are displayed in a lower resolution, ~~if about the~~ about the luminance component, ~~decoding process is performed in a~~ is decoded at half resolution and ~~about the color-difference components, decoding process is performed in an~~ is decoded at its original resolution[[,]] the ratio of Y : U : V becomes equal to 4 : 2 : 2. As a result, information content about the color-difference components are relatively increased, and image data are displayed with being full of color even if the image data are reduced.
